Five major advantages of manual drafting: 1. Work Done is Original: In the past, drafters sat at drawing boards and used pencils, pens, compasses, protractors, triangles, and other drafting devices to prepare a drawing by hand. When doing manual drafting, most of the drafting work is done by technical people like the architect / engineer / diploma holders making their work to be genuine.

It is a method in which a drafting machine is used on a table to produce an engineering drawing. The drafting machine is installed on the angular arm or beam, that can be secured on a table with a clamp permanently. The protractor is a part of the assembly process, positioned in the middle of the drafting machine to allow the drafter to change the angles of the scales and to make sure that the knob is locked in place.
