$V[m^3]$ is a function of $t[s]$, $D[m]$, and $V[m/s]$ It is obvious that the only way to end up with the unit “ m^3 ” for volume is to multiply the quantities t and V with the square of D . Therefore, the desired relation is $V = CD^2 Vt$ where the constant of proportionality is obtained for a round hose, namely, $C = \pi/4$ so that $V = (\pi/4) D^2 Vt$.
