The book consists of three separate volumes. The first volume defines the net model (i. e. , hierarchical CP-nets) and the basic concepts (e. g. , the different behavioural properties such as deadlocks, fairness and home markings). It gives a detailed presentation of many small examples and a brief overview of some industrial applications.

This book presents a coherent description of the theoretical and practical aspects of Coloured Petri Nets (CP-nets or CPN). It shows how CP-nets have been developed - from being a promising theoretical model to being a full-fledged language for the design, specification, simulation, validation and implementation of large software systems (and other systems in which human beings and/or computers communicate by means of some more or less formal rules).

2.2. Coloured Petri Nets (CPNs). Coloured Petri net (CPN) [16–18] is an executable model that combines the capabilities of Petri nets [30–37, 39] and a high-level functional programming language based on Standard ML (known as CPN ML) [29].

A transition t is enabled for the color c in the marking M and is noted $M(t, c) > 0$ if and only if: $\forall p \in P, M(p) \geq P_r e(p, 0) + c$ A colored Petri net can be defined with priorities. Such a Petri net is defined by a couple: CPN, τ , where τ is the priority function defined from T to N .
