The First Instinct Fallacy | Psychology Today

To establish the first-instinct fallacy, the researchers examined the introductory psychology midterm exams of 1,561 University of Illinois students for eraser marks. They counted the number of times students changed answers and found that 51 percent of the changes were from wrong to right, 25 percent were from right to wrong and 23 percent were from wrong to wrong.

Trust your first instincts: Fallacious folklore?

However, most students and many teachers would choose "go with your gut instinct", otherwise known as the First Instinct Fallacy (Kruger, Wirtz, & Miller, 2005). In this well-known article by Kruger and colleagues, they found (in 4 separate experiments) that when students change their answers, they typically change from incorrect to correct answers, they underestimate the number of changes from incorrect to correct answers, and overestimate the number of changes from incorrect to correct.

First Instinct Fallacy - engineeringstudymaterial.net

Perhaps most important, path analyses fully supported our proposed causal model, namely, that switching when one should have stuck produces more negative affect, which in turn produces a memory bias, which in turn gives rise to the first instinct fallacy (FIF). First, as already mentioned, there was a significant relationship between the decision of whether to switch versus stick and frustration (? =.48, p <.001).
