Microfoil Balloon Helium Chart - Brody's BALLOONS ...

The density of helium is equal to 0.1785 grams per liter. The density of air, on the other hand, is about 1.25 grams per liter. Leaving some tolerance for the weight of the balloon and the string, we can approximate that every liter of helium has a lifting force of one gram.

Helium Balloons Calculator

balloon helium chart NOTE:The listed average inflation sizes and numbers of balloons per helium tank are conservative averages. A properly inflated, helium-filled Microfoil balloon will float for at least 3-5 days and can be easily refreshed.

Gas Cylinders Accessories & LATEX HELIUM CHART Microfoil ...

1 cubic centimeter of Helium weighs 0.00018 gram [g] 1 cubic inch of Helium weighs 0.0001 ounce [oz] Helium weighs 0.0001785 gram per cubic centimeter or 0.1785 kilogram per cubic meter, i.e. density of helium is equal to 0.1785 kg/m³; at 0\u00b0C (32\u00b0F or 273.15K) at standard atmospheric pressure .

Helium volume to weight conversion - Aqua-Calc

The air displaced by that cubic meter is 1.225 kg. Air has a molar mass of about 29 whereas helium has a molar mass of 4. So the helium filling that volume has a mass of 4/29 1.225 kg = 0.169 kg or about 170 grams. The little bit of extra buoyancy (1.225 kg - 0.169 kg - 1 kg) covers the mass of the balloon envelope and string.

How much helium in kilograms do I need to lift a weight of ...
