A Guide to Hydraulic Cylinders Market leading innovations with hydraulic cylinders Hydraulic cylinders were first developed in the late 18th Century. Hydraulic systems are based on Pascal's law of fluid pressure, which states that when pressure is applied on a fluid, an equal pressure will be exerted throughout that fluid in all directions.

This design from System Seals provides more accurate piston and rod guidance inside the cylinder under varying load conditions. Many of the failures in a hydraulic system show similar symptoms: a gradual or sudden loss of high pressure, resulting in the loss of power or speed in the cylinders.
