Abstract Serious games open up many new opportunities for complex skills learning in higher education. The inherent complexity of such games, though, requires large efforts for their development. This paper presents a framework for serious game design, which aims to reduce the design complexity at conceptual, technical and practical levels.

The approach focuses on a relevant subset of serious games labelled as scenario based games.

Educational Games for Learning - ERIC

The state-space complexity of a game is the number of legal game positions reachable from the initial position of the game. When this is too hard to calculate, an upper bound can often be computed by also counting (some) illegal positions, meaning positions that can never arise in the course of a game.

Schools are now using game-based learning more and more to help students understand and think about complex topics to help build math skills (i.e. STEM) or get to grips with concepts in science. Gamifying learning and allowing children to see things in a different way can encourage them to grasp topics faster and in a deeper way.
