*Intestinal obstruction - Diagnosis and treatment - Mayo Clinic*

Intestinal obstruction is a blockage that keeps food or liquid from passing through your small intestine or large intestine (colon). Causes of intestinal obstruction may include fibrous bands of tissue (adhesions) in the abdomen that form after surgery, an inflamed intestine (Crohn's disease), infected pouches in your intestine (diverticulitis), hernias and colon cancer.

*Intestinal obstruction - Symptoms and causes - Mayo Clinic*

A health care provider will treat intestinal pseudo-obstruction with nutritional support, medications, and, in some cases, decompression. Rarely, a person will need surgery. If an illness, a medication, or both cause intestinal pseudo-obstruction, a health care provider will treat the underlying illness, stop the medication, or do both.

*Intestinal Pseudo-obstruction | NIDDK*

Conservative management includes intestinal intubation and decompression, aggressive intravenous rehydration, and antibiotics [ 51 ]. The results of the conservative management of acute mechanical small bowel obstruction are uncertain and not conclusive, from the data of literature [ 52 ].
