Other causes for a hard-to-shift manual transmission include: Worn or loose internal parts (shift fork, levers, shafts) Low oil level (or the incorrect kind of oil) Misaligned transmission; Synchronizer issues; The Transmission Is Stuck in gear; You may notice that you just cannot get the transmission out of gear. This symptom might indicate:

Common Manual Transmission Problems | Transmission ...

Bearings: When bearings are worn and begin to bind or offer resistance, hard shifting occurs. A manual transmission uses needle roller bearings between the driven gears and the main shaft they spin on. This enables the gears to spin freely when not fastened to the shaft by the synchronizer hub assembly.

Manual Transmission Hard Shifting Problems: Clutch ...

You should check your fluid every 30,000 to 60,000 miles in a manual transmission car. Failure to do so can cause your transmission fluid to become contaminated with bits of metal from the bearings, synchronizers and gears. This can make shifting difficult or impossible.

How to Troubleshoot a Manual Transmission That Will Not Shift

I bought my manual transmission, 6-speed '08 Hyundai Tiburon around 8/15/16 with about 91,500 miles on it. There was only some difficulty in shifting gears when I test drove the vehicle. Between 9/1/16 and 10/10/16, I've found it is extremely difficult to shift gears- it's the most difficult when putting the
