Object-oriented programming (OOP) is not the use of a particular language or a tool. It is rather a way of design based on the three fundamental concepts:

- Encapsulation – the ability to package data and functions together into classes

Object-oriented programming is more than just classes and objects; it's a whole programming paradigm based around [sic] objects (data structures) that contain data fields and methods. It is essential to understand this; using classes to organize a bunch of unrelated methods together is not object orientation.
