For more than two decades there has been an increase in the incidence of head injuries caused by gunshot wounds. Gunshot wounds to the head have become a leading cause of traumatic brain injury (TBI) in many urban areas in the U.S. due, in part, to a surge in gang violence and overall homicide rates. Other cases involve suicide and unintentional accidents.

Neurosurgical Treatment for Gunshot Wound Head Trauma

A wound in which the projectile breaches the cranium but does not exit is referred to as a penetrating wound. An injury in which the projectile passes entirely though the head, leaving both entrance and exit wounds, is referred to as a perforating wound. As noted below, multiple factors determine the extent of damage caused by a gunshot wound.

Neurosurgical Treatment for Gunshot Wound Head Trauma

A closed head wound results from a direct blow to the headwhere the skull is not cracked open, but there is damage to the brain, becauseof the contact between the brain and the skull that resulted from the blow. A penetrating wound occurs when a foreign object passesthrough the skull and into the brain, such as a gunshot or stab wound to thehead.

John writes of the beast, " One of his heads appeared to be fatally wounded, but his fatal wound was healed. The whole earth was amazed and followed the beast " (v. 3). Commentators offer numerous explanations as to who or what the " head " is and the nature of the deadly wound. Here are two widely accepted possibilities:

A fatal head wound – Revelation 13:3 | OnceDelivered.net

The five wounds comprised one through each hand or wrist, one through each foot, and one to the chest. Two of the wounds were through either his hands or his wrists, where nails were inserted to fix Jesus to the cross-beam of the cross on which he was crucified. According to forensic expert Frederick T. Zugibe, the most plausible region for the nail entry site in the case of Jesus is the upper ...
