Americans at Risk for Heart Disease

As plaque builds up in the arteries of a person with heart disease, the inside of the arteries begins to narrow, which lessens or blocks the flow of blood.

Plaque can also rupture (break open). When it does, a blood clot can form on the plaque, blocking the flow of blood.

Pathophysiology, Diagnosis ...

The coronary arteries supply blood, oxygen and nutrients to your heart. A buildup of plaque can narrow these arteries, decreasing blood flow to your heart. Eventually, the reduced blood flow may cause chest pain (angina), shortness of breath, or other coronary artery disease signs and symptoms. A complete blockage can cause a heart attack.

What causes chronic venous insufficiency? Veins return blood to the heart from all the body's organs. To reach the heart, the blood needs to flow upward from the veins in the legs. Calf muscles and the muscles in the feet need to contract with each step to squeeze the veins and push the blood upward.
