The periodic table helps predict some properties of the elements compared to each other. Atom size decreases as you move from left to right across the table and increases as you move down a column. The energy required to remove an electron from an atom increases as you move from left to right and decreases as you move down a column.

The periodic table is also split into four blocks: s = red, p = green, d = yellow, and f = blue. To further complicate your studies, the periodic table is also broken into four blocks. Check out the table above. Seriously, check it out. We'll wait. The first two columns (shown in red) comprise the s-block.
