Study Guide For Modern Refrigeration And Air Conditioning

Most air cooled refrigeration systems are designed so that the refrigerant will condense at a temperature about 25 to 30 degrees above the ambient air temperature around the condenser. Most water cooled systems are designed for 75° to 95° entering condenser water temperature, with 85° being the design temperature.

The refrigeration cycle explained in plain english.

Air conditioning is a type of refrigeration where thermal energy is taken away from the air (typically in a room or a vehicle) in order to keep the air cooler. What is Refrigeration Refrigeration refers to processes that take thermal energy away from a place and gives off that energy to a place with a higher temperature.

Difference Between Refrigeration and Air Conditioning

If the type and temperature of a refrigerant are known, then the pressure being exerted by the refrigerant can be calculated Recovered refrigerant must not fill a jug more than 60% by weight Dangerous hydrostatic conditions can occur if a jug is filled 100% full with refrigerant vapour.
