Spectrophotometric Determination Of Chlorpheniramine

This is likewise one of the factors by obtaining the soft documents of this **spectrophotometric determination of chlorpheniramine** by online. You might not require more epoch to spend to go to the books opening as without difficulty as search for them. In some cases, you likewise complete not discover the message spectrophotometric determination of chlorpheniramine that you are looking for. It will agreed squander the time.

However below, following you visit this web page, it will be as a result unquestionably easy to get as without difficulty as download guide

~~Spectrophotometric Determination Of Chlorpheniramine~~

A rapid and simple method for simultaneous determination of Chlorpheniramine Maleate (CPM) and Phenylpropanolamine Hydrochloride (PPM) by “Two Wavelengths Method” using UV spectrophotometer has been developed in combined pharmaceutical dosage forms. “The absorbance difference between two points on the mixture spectra is directly proportional to the concentration of the component of interest independent of interfering component”.

Background: Early methods for simultaneous determination of Chlorpheniramine Maleate (CPM) and Phenylpropanolamine Hydrochloride (PPM) in combined pharmaceutical dosage forms are expensive and time...

~~(PDF) Spectrophotometric determination of Chlorpheniramine ...~~

Spectrophotometric technique is considered to be the simplest and operator friendly among other available analytical methods for pharmaceutical analysis. The objective of the study was to develop a precise, accurate and rapid UV-spectrophotometric method for the estimation of chlorpheniramine maleate (CPM) in pure and solid pharmaceutical formulation.

In this study a simple, rapid and sensitive spectrophotometric method was developed for the determination of an antihistaminic drug chlorpheniramine maleate (CPM) in pure form, pharmaceutical preparations, spiked humane urine and spiked blood serum. This method was based on the formation of ion-pairs between the basic nitrogen of the CPM drug and four chromogenic reagents namely bromocresol purple (BCP), alizarine Red S (ARS), eriochrome cyanine R (ECR), and cresol red (CR).

Determination of Chlorpheniramine
spectrophotometry at 264 or 265 nm for DCM determination in syrup (oral solution) or tablets has been recommended by USP 28. However, the method is applied only after several alkaline and/or acidic extractions of the samples with ether or hexane, and back-extractions of the aqueous portions with the same organic solvent.

was developed for simultaneous estimation of PCM and CPM in FDT. Among all six formulations, F2 with CCS 27% concentration found the best formulation. F2 resulted in best wetting time i.e. 26 sec, good water absorption ratio i.e. 81%, fastest disintegration time i.e. 20 sec and faster drug release within 25 min.
