Gasoline engines are much closer to a 1:1 ratio. The reason why diesel engines produce so much torque stems from three key things: 1) boost created by the turbocharger, 2) stroke, and 3) cylinder pressure. At the present time, production diesel engines see 25 to 35 psi of boost straight from the factory.

The compression ratio is the comparison of cylinder volume when the piston is at bottom dead center (BDC) to cylinder volume when the piston is at top dead center (TDC). The formula is this: $\text{volume at BDC} + \text{volume at TDC} = \text{compression ratio volume at TDC}$. Diesel Engine Mechanic 02/28/19 11.
